Searching Portal Notifications

Notification details on the 50 most-recent ALERT- or WARN-level notifications issued by all of your Command Centers display below the Portal map. Once you context-switch to a particular Command Center by clicking on it, the notifications below the map display only those of your selected Command Center. INFO-level notifications are also included when you click into the Command Center context.

The Portal's Search Notifications facility enables you to filter notification details by Device IP address, and more. To perform a basic search in the Notifications pane, enter an IP address, MAC address, system name, or any label associated with a device to retrieve device data that matches your search criteria. You can enter partial information (e.g., 10 instead of 10.9.0.1) to retrieve all details beginning with your entry, as illustrated:

Search notifications

Command Center	Name	Priority	Zone	Device IP Address	Message	When
FA-ESI-CC	Device Discovered	INFO	Zone1	10.9.0.198	Device 65.246.244.69/32 created.	6/3/16 3:53:05 PM
FA	Device Discovered	INFO	Hybrid_Zone	10.8.0.24	Device 172.18.1.136/32 created.	6/3/16 2:53:58 PM
FA-ESI-CC	Device Discovered	INFO	Zone1	10.9.0.198	Device 65.246.244.93/32 created.	6/3/16 2:13:14 PM

Sort the data by clicking column headings or dig deeper on a particular IP or MAC address by clicking its link.
