# Creating the Dashboard Menu

To build a dashboard menu in Lumeta, tag dashboards with a category name. The category name becomes an option on the Dashboard menu. The dashboard bearing the tag nests within the newly defined menu option.

1. In the Lumeta GUI, browse to **Dashboards** > **Dashboard Manager**.

2. Select the dashboard to which you want to add a submenu.
   The dashboard can be one of the standard dashboards that comes with Lumeta, a dashboard you had created, or a new dashboard.

3. Click **Edit** or **Add Dashboard**.
   For the full procedure on adding a new dashboard that includes submenu options, go to the Adding a Dashboard page.

4. In the Tags field, enter a tag for a new or existing submenu using the syntax
   `$category:<name of dashboard submenu>$`
   `For example, $category:Lumeta Performance Monitors$`

General

|	
Name •	z_dashboard ✓
	⬤ Set as default dashboard
	Setting this as your default dashboard will replace your existing default dashboard selection.
Tags	$category:Spectre Performance Monitors$, $category:DFR menu option 1$
Comment	Enter a comment for this dashboard
	Help other users identify this dashboard with a brief description.

5. Click **Update Dashboard**.
   The updates are reflected in the Dashboard menu.
