

Checking the State of Active Database Queries

Settings > Support Tools > Active Database Queries enables you to check the state of active database queries. The metadata it generates about recently run queries is expected to be only indirectly useful to you. It is supplied to Support for their use in troubleshooting issues for you.

Fetch Database Queries

Database	Process ID	Query	User
observer	6677	select datname as database,...	observer
observer	6680	select now()	observer
observer	7544	select now()	observer
observer	12127	select now()	observer
observer	13554	COMMIT	observer
observer	12105	select now()	observer
observer	12126	select now()	observer
observer	6678	select now()	observer
observer	13443	select now()	observer
observer	12777	select now()	observer
observer	6685	select now()	observer
observer	7994	select now()	observer
